

Split Core Hall Effect AC Current Sensor CYHCS-EKLV

This Hall Effect current sensor is based on open loop principle and designed with a high galvanic isolation between primary conductor and secondary circuit. It can be used for measurement of AC current, pulse currents etc. The output of the transducer reflects the rectified average value of the current in the carrying conductor.

GIN: Gain Adjustment

Pin arrangement of connector:

1:	Vcc	2:	-Vcc or GND
3:	OUTPUT	4:	0V (GND)

Cable connection:

Red:	Vcc

Notes:

1. Connect the terminals of power source, output respectively and correctly, never make wrong connection.
2. Two potentiometers can be adjusted, only if necessary, by turning slowly to the required accuracy with a small screwdriver.
3. The best accuracy can be achieved when the window is fully filled with current carrying conductor.
4. The in-phase output can be obtained when the current direction of current carrying conductor is the same as the direction of arrow marked on the transducer
