

Split Core Hall Effect DC Current Sensor CYHCT-EKLC

This Hall Effect current sensor is based on open loop principle and designed with a high galvanic isolation between primary conductor and secondary circuit. It can be used for measurement of DC current etc. The output of the transducer reflects the real wave of the current carrying conductor.

PIN Definition and Dimensions

OFS: Offset Adjustment

GIN: Gain Adjustment

Pin arrangement of connector:

1: Vcc 2: -Vcc or GND
3: OUTPUT 4: 0V (GND)

Cable connection:

Red: Vcc
Blue: -Vcc or GND
Yellow: OUTPUT
Black: 0V (GND)

Notes:

1. Connect the terminals of power source, output respectively and correctly, never make wrong connection.
2. Two potentiometers can be adjusted, only if necessary, by turning slowly to the required accuracy with a small screwdriver.
3. The best accuracy can be achieved when the window is fully filled with current carrying conductor.
4. The in-phase output can be obtained when the current direction of current carrying conductor is the same as the direction of arrow marked on the transducer
